This Information Management and Data Analytics is brought to you for free and open access by the Computer and Information Sciences, Undergraduate (CISC) at Digital Commons at Harrisburg University. It has been accepted for inclusion in Project Topics and Ideas by an authorized administrator of Digital Commons at Harrisburg University. For more information, please contact library@harrisburgu.edu.

Computer and Information Science Undergraduate Project Topics and Ideas

Title:

Machine Learning in High-performance Networking (Tentative)

Author:

Daqing Yun - dyun@harrisburgu.edu

Difficulty:

Moderate

Specialization:

Information Management and Data Analytics

If other, please specify:

Most Appropriate Course:

Project II

Brief Description:

Apply machine learning methods to improve high-performance networking

Number of students needed:

1

Outcomes and Deliverable:

Source code + publishable project report

Skills Required:

Programming skills in such as Python, Go, etc. Understanding of ML algorithms, libraries, and frameworks.

Available Resources:

Preliminary promising results; Available datasets; Source code base; Collaboration with scientists in other institutions.

Program Goal:

CISC 1.1: Mathematical Analysis, CISC 1.2: Sound Reasoning, CISC 1.3: Develop Solution, CISC 1.4: Deploy Solution CISC 2.1: Hardware Platform, CISC 2.3: Networking CISC 3.1: Explore New Methodologies CISC 4.1: Written Communication, CISC 4.2: Oral Communications

Student Learning Outcomes:

1a: The student should be able to analyze a problem in a manner that facilitates the design of its solution., 1b: The student should be able to apply relevant principles of computing during their analysis of a problem., 2b.:Student is able to develop a software solution from a formal design specification., 2c: Student is able to evaluate a software solution to determine its compliance with the specification., 3a: Student will be able write in a standardized format in order to organize their thoughts and deconstruct their ideas at a level appropriate for the desired audience.
